Application to connect and operate a secondary network

Type of secondary network being requested

1. Select the type of secondary network being requested.
2. Provide the Connection Details - number and capacity (in amps) of each connection point to the Powerco Network – electrical schematic and site plan must be provided.

***NOTE: For all three Network options, the private electricity Network owner is responsible for the maintenance and operation of their distribution network downstream of the connection point to the Powerco Network. The private Network owner is liable for any faults, claims or losses that arise out of incidents that occur on their network.**

A: Customer network

A Customer Network is a privately owned electricity network on private property:

- Where customers do not have ICPs.
- Where customers have no choice of Retailer.
- There will be one Powerco ICP created for the connection point to the Powerco Network.
- Refer Note* above regarding private network owners responsibilities.

B: Embedded network

An Embedded Network is a privately owned electricity network on private property:

- Where customers have ICPs allocated by the embedded Network operator,
- The embedded Network operator must be certified as a reconciliation participant.
- There will be one Powerco ICP created for the connection point to the Powerco Network.
- Refer Note* above regarding private network owners responsibilities.

C: network extension

A Network Extension is a privately owned electricity network on private property:

- Where customers have ICPs allocated by Powerco.
- Refer Note* above regarding private network owners responsibilities
